

Culqi API Python - Documentation

SoftButterfly Development Team

March 7, 2021

1 Introducción

La API de Culqi está construido bajo los estándares de REST. Es decir, nuestra API posee URLs orientada a recursos, y hace uso de los códigos de respuesta HTTP para indicar los posibles errores en el API. Es importante indicar que se encuentra implementada una autenticación HTTP (Bearer Token), solicitada en cada petición. Además, soportamos las solicitudes HTTP de origen cruzado (CORS), permitiendo que tu sitio y Culqi puedan interactuar de manera segura mediante nuestra API desde una aplicación cliente (aunque NUNCA deberías exponer tu Llave Secreta en el código de la aplicación web cliente). Por otro lado, un objeto JSON es retornado en cada una las peticiones hacia el API, incluyendo los errores. Adicionalmente nuestras bibliotecas convierten las respuestas en objetos específicos para cada lenguaje soportado.

Finalmente, para que puedas comenzar a experimentar con nuestra API, todas las cuentas registradas en Culqi poseen llaves para el entorno de pruebas (Regístrate y obtén tus llaves) y el entorno de producción. Usando las llaves de prueba las transacciones nunca pasan por las redes bancarias y no tienen ningún costo. (¡Recuerda usar tarjetas de prueba, no tarjetas reales al probar!).

2 Inicialización

Para inicializar el cliente necesitamos la llave pública y la llave privada que nos dan en Culqi al crear nuestro comercio. Suponiendo que hemos colocado nuestras llaves en un archivo `.env`, procedemos a cargarlas de la siguiente manera.

```
[1]: import os
import json
from uuid import uuid4
from copy import deepcopy
from dotenv import load_dotenv

load_dotenv();
```

Asumiendo que nuestras llaves fueron almacenadas en las variables de entorno `API_PUBLIC_KEY` y `API_PRIVATE_KEY`, inicializamos el cliente así

```
[2]: from culqi import Culqi

public_key = os.environ.get("API_PUBLIC_KEY")
```

```
private_key = os.environ.get("API_PRIVATE_KEY")

culqi = Culqi(public_key=public_key, private_key=private_key)
```

3 Recursos

Para mostrar la forma de acceder a los distintos recursos de Culqi emplearemos datos de pruebas. Estos datos serán los mismos que utilizamos en los tests.

```
[3]: class Data:
      CARD = {
          "successful": {
              "visa": {
                  "card_number": "4111111111111111",

```

Una función que vamos a emplear es `display` para mostrar de manera legible las respuestas entregadas por Culqi en cada una de nuestras operaciones,

```
[4]: def display(data):
      print(json.dumps(data, indent=4, ensure_ascii=False))
```

3.1 Tokens

Consulta la documentación de Culqi en <https://apidocs.culqi.com/#/tokens>

```
[5]: def get_token_data(code, provider):
      return deepcopy(Data.CARD[code][provider])
```

3.1.1 Listar

```
[6]: token_list = culqi.token.list(
      data={
          "limit": 1,
      },
      headers={
          "Accept-Encoding": "identity",
      }
  )

display(token_list)

{
  "status": 200,
  "data": {
    "paging": {

    }
}

```

3.1.2 Crear

```

[7]: token_data = get_token_data("successful", "visa")
token = culqi.token.create(data=token_data)

display(token)

```

```

{
    "status": 201,
    "data": {
        "object": "token",
        "id": "tkn_test_qW2ETydmZ8CmKZQE",
        "type": "card",
        "creation_date": 1615131587000,
        "email": "richard@piedpiper.com",
        "card_number": "411111*****1111",
        "last_four": "1111",
        "active": true,
        "iin": {

```

```

    "object": "iin",
    "bin": "411111",
    "card_brand": "Visa",
    "card_type": "credito",
    "card_category": "Clásica",
    "issuer": {
      "name": "BBVA",
      "country": "PERU",
      "country_code": "PE",
      "website": null,
      "phone_number": null
    },
    "installments_allowed": [
      2,
      4,
      6,
      8,
      10,
      12,
      3,
      5,
      7,
      9,
      24,
      48
    ]
  },
  "client": {
    "ip": "191.98.182.73",
    "ip_country": "Peru",
    "ip_country_code": "PE",
    "browser": "UNKNOWN",
    "device_fingerprint": null,
    "device_type": "Escritorio"
  },
  "metadata": {}
}
}

```

3.1.3 Leer

```

[8]: token_id = token["data"]["id"]
token = culqi.token.read(id=token_id)

display(token)

```

```

{
  "status": 200,

```

```

"data": {
  "object": "token",
  "id": "tkn_test_qW2ETydmZ8CmKZQE",
  "type": "card",
  "creation_date": 1615131587000,
  "email": "richard@piedpiper.com",
  "card_number": "411111*****1111",
  "last_four": "1111",
  "active": true,
  "iin": {
    "object": "iin",
    "bin": "411111",
    "card_brand": "Visa",
    "card_type": "credito",
    "card_category": "Clásica",
    "issuer": {
      "name": "BBVA",
      "country": "PERU",
      "country_code": "PE",
      "website": null,
      "phone_number": null
    },
    "installments_allowed": [
      2,
      4,
      6,
      8,
      10,
      12,
      3,
      5,
      7,
      9,
      24,
      48
    ]
  },
  "client": {
    "ip": "191.98.182.73",
    "ip_country": "Peru",

    "browser": "UNKNOWN",
    "device_fingerprint": null,
    "device_type": "Escritorio"
  },
  "metadata": {}
}
}

```

3.1.4 Actualizar

```
[9]: token_id = token["data"]["id"]
token_metadata = {
    "metadata": {
        "orderId": "1234567890"
    }
}
token = culqi.token.update(id=token_id, data=token_metadata)

display(token)
```

```
{
  "status": 200,
  "data": {
    "object": "token",
    "id": "tkn_test_qW2ETydmZ8CmKZQE",
    "type": "card",
    "creation_date": 1615131587000,
    "email": "richard@piedpiper.com",
    "card_number": "411111*****1111",
    "last_four": "1111",
    "active": true,
    "iin": {
      "object": "iin",
      "bin": "411111",
      "card_brand": "Visa",
      "card_type": "credito",
      "card_category": "Clásica",
      "issuer": {
        "name": "BBVA",
        "country": "PERU",
        "country_code": "PE",
        "website": null,
        "phone_number": null
      },
    },
    "installments_allowed": [
      2,
      4,
      6,
      8,
      10,
      12,
      3,
      5,
      7,
      9,
      24,
    ]
  }
}
```

```

        48
    ]
},
"client": {
    "ip": "191.98.182.73",
    "ip_country": "Peru",
    "ip_country_code": "PE",

```

3.8.6 Eliminar

```

[51]: order_id = order["data"]["id"]
      deleted_order = culqi.order.delete(id=order_id)

      display(deleted_order)

```

```

{
  "status": 204,
  "data": {}
}

```

3.9 Eventos

Consulta la documentación de Culqi en <https://apidocs.culqi.com/#/eventos>

3.9.1 Listar

```

[52]: event_list = culqi.event.list(
      data={
        "limit": 1,
      },
      headers={
        "Accept-Encoding": "identity",
      },

```

```
)

display(event_list)
```

```
{
  "status": 200,
  "data": {
    "paging": {
      "previous": null,
      "next": null,
      "cursors": {
        "before": null,
        "after": null
      },
      "remaining_items": 0
    },
    "items": []
  }
}
```

3.9.2 Leer

```
[53]: event_id = "sample_event_id"
event = culqi.event.read(id=event_id)

display(event)
```

```
{
  "status": 400,
  "data": {
    "object": "error",
    "type": "parameter_error",
    "merchant_message": "No existe el evento que intentas consultar:
'sample_event_id' o tiene un formato inválido."
  }
}
```

3.10 IINs

Actualmente no hay documentación sobre los IINs en la web oficial de Culqi

3.10.1 Listar

```
[54]: iin_list = culqi.iin.list(
  data={
    "limit": 1,
  },
  headers={
```

```

        "Accept-Encoding": "identity",
    },
)

display(iin_list)

```

```

{
  "status": 200,
  "data": {
    "paging": {
      "previous": "https://api.culqi.com/v2/iins?limit=1&before=533958",
      "next": "https://api.culqi.com/v2/iins?limit=1&after=533958",
      "cursors": {
        "before": "533958",
        "after": "533958"
      },
      "remaining_items": null
    },
    "items": [
      {
        "object": "iin",
        "bin": "533958",
        "card_brand": "MasterCard",
